

Prehistoric Art

SCIENCE WEEK

What
colours can
we see?

Why were they
limited to these
colours?

Did they have access
to paints? Crayons?
Felt Tips?

So what could they
use?

Crushed Berries

Burnt Wood

Plants

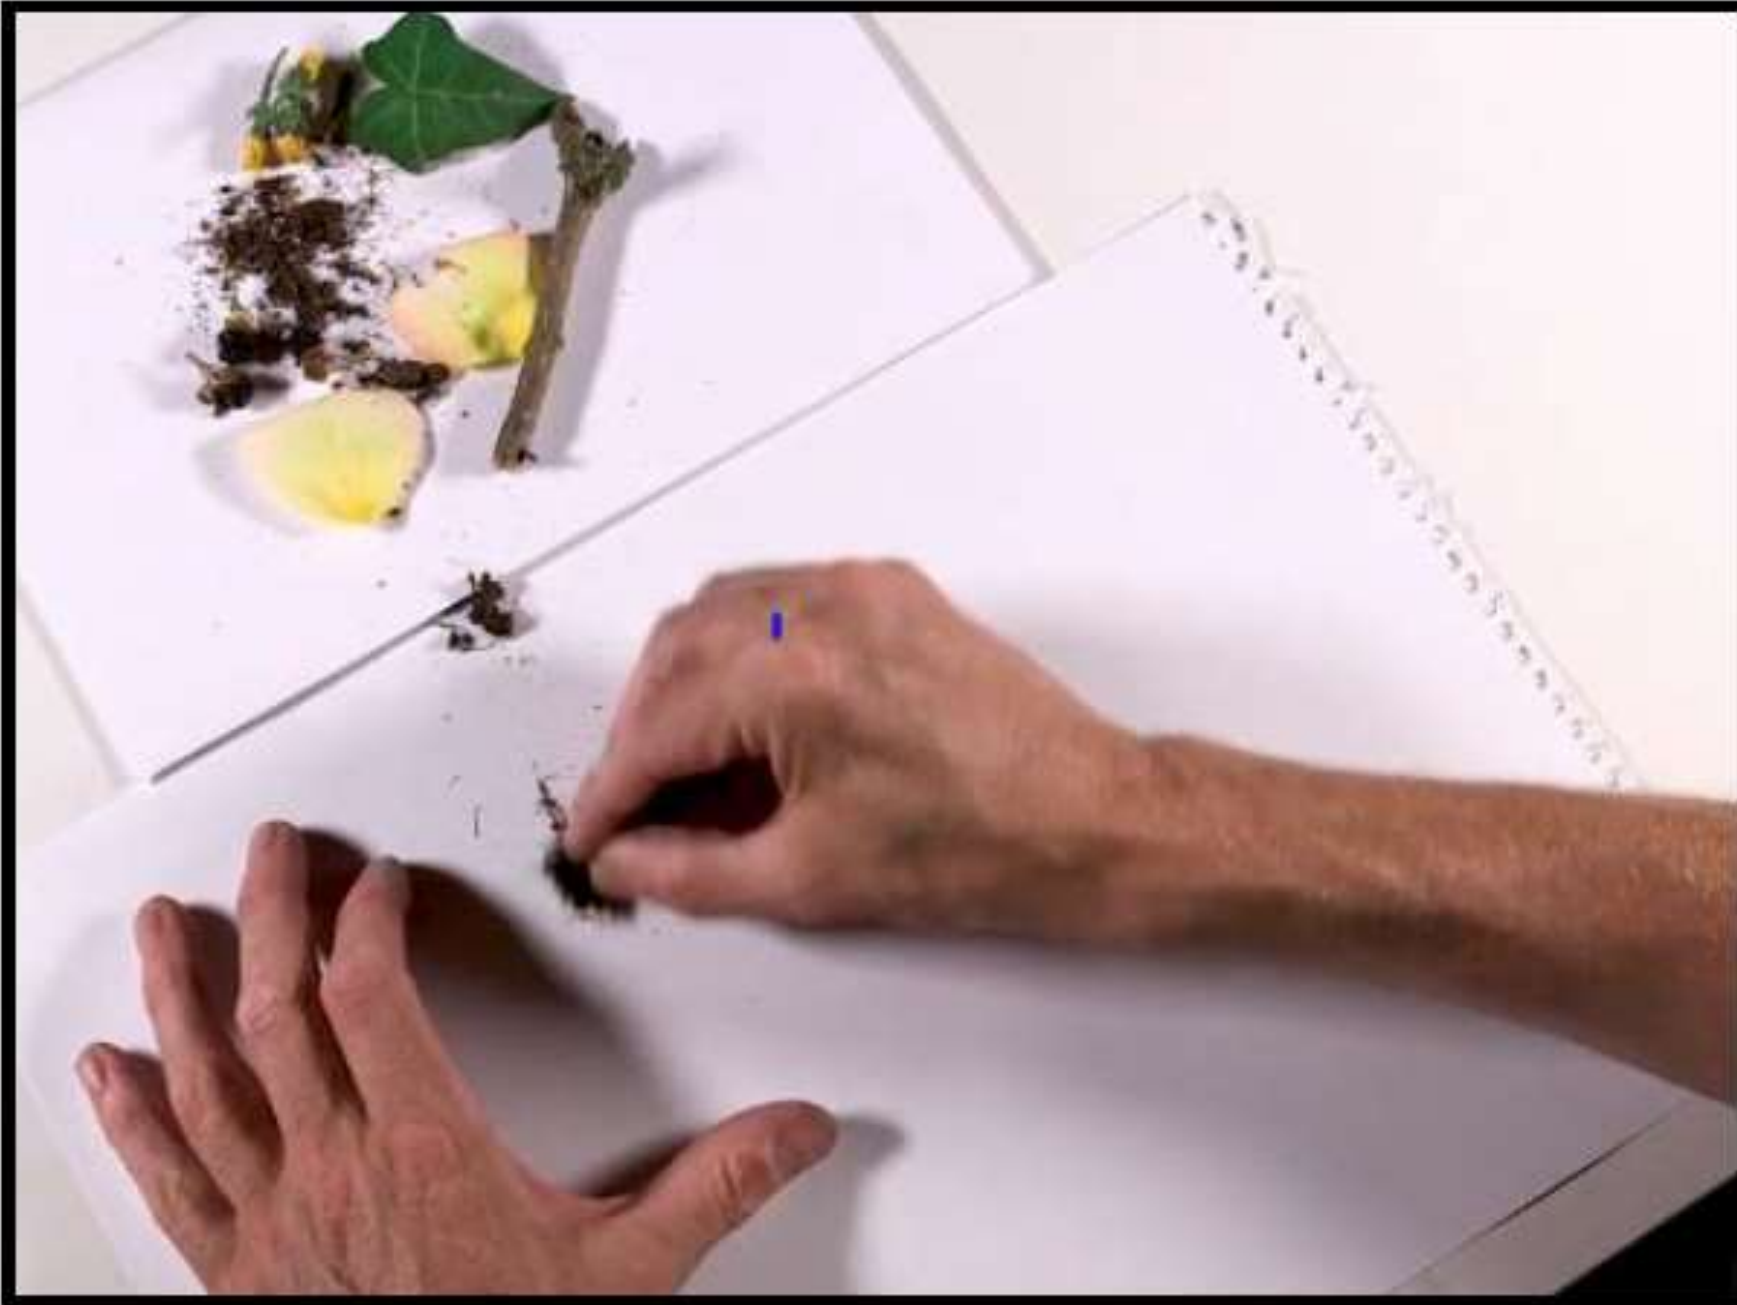

Animal Fats

Did you
guess
correctly?

Can you make your own natural paint?

You will need:

Using the materials you have, have a go at making marks on your page.

**Try adding
a little
water to
bring out
the
colours.**

Label each colour with what you used.

Now we are going to make our own paint by mixing flour and water to make a paste.

Now add different pigments such as turmeric or paprika to change the colour.

Spend time mixing the paint and don't be tempted to add more water.

Experiment making marks and symbols on your page.
