

Rose's Florist has 100 daffodils.

Have a think

On Monday Mr Rose sells two fifths of his daffodils.

On Tuesday he sells one third of the remaining daffodils.

What do you know? What could you find out?

Daffodils are sold in pairs that cost 15p.

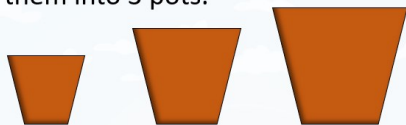

Amir spends £2 and 10p.

How many daffodils does he buy?

Amir has 28 daffodils.

He plants them into 3 pots.

He plants twice as many in the medium pot as the small pot.

He plants twice as many in the large pot as the medium pot.

How many does Amir plant in each pot?

Have a think

Amir has 28 daffodils.

He plants them into 2 different sized pots.

A small pot holds 2 daffodils and a large pot holds 3 daffodils.

How many of each pot could Amir use so that he plants all of his daffodils?

Have a think

Annie buys some tulips and roses and spends exactly £3
Which flowers could she have bought?

Tulips
30p each

Roses
40p each

£3 = 300 pence
